ABSTRACT OF THE DISCLOSURE

A medical reference and record system and method for displaying known information pertaining to a medical disorder in a standardized format and integrating with it information from a patient to facilitate evaluation and treatment of the patient and improve communication of patient information from one health care practitioner to another. Presents reference information in ways useful for training of medical students, residents, and practitioners. A user can assess the relevance of presented information to a patient and customize the presented information to the patient. Reference information and fields for entry of patient data are combined in ways useful for multiple patients and for retention in a patient's medical record. The system and method may be implemented in printed or computerized formats.
